OTHER PROJECTS

PRESIDENTIAL ELECTION FORECASTS

For the 2004 and 2008 presidential elections, I set up a website that forecasted election results predictions using a probabilistic model based on state-level polls. I abandoned the project since a similar idea was later pursued and developed with more resources by media organizations. See my website presidentforecast.andreamoro.net for a snapshot of the latest version of the site and Wall Street Journal coverage.

LITERARY CONCORDANCES

In the digital humanities project available at litconcordance.andreamoro.net, I present in searchable form the text of two literature classics, Dante's Divina Commedia and James Joyce's Ulysses.

The code presents a web form allowing for the computation of the number of word occurrences in the text and simplifies access to the multiple occurrences of the same word. The website is intended to facilitate scholars' and translators' access to the text. The underlying code running the site is freely available and can be easily adapted to other texts.
